

CLAIMS

What is claimed is:

1. A structure of a guide spring sheet for a traverse,
used to connect to one side of a main body of driving guide
5 teeth for a traverse, comprising a sheet body bent at one
direction disposed at the top end of a elastic sheet and
used to prop against the rear side of a teeth plate of said
main body; a pressing sheet at the top end of said elastic
sheet being disposed at one side of the top end of said sheet
10 body for being propped against the top end of a elastic arm
of said main body.

2. The structure according to claim 1, wherein a pressing
sheet is disposed at another side of the top end of said
sheet body for being propped against the top end of another
15 elastic arm of the said main body.

3. The structure according to claim 1, wherein a hole
for being engaged with a screw is disposed at the top end
of said elastic sheet.
